SUMMARY

Full stack developer with hands-on experience building responsive, user-focused web applications using React and modern JavaScript, with backend experience in C#, .NET, and REST API development. Strong focus on clean architecture, scalable systems, and collaborative development practices. Experience contributing to real-world products in Agile environments, with a growing interest in AI-powered applications and continuous learning.

PROJECTS

Homestead Hub — Full Stack Developer (React Native / API Integration)

React Native, JavaScript, REST APIs, Appwrite

- Designed and implemented a component-driven UI architecture to support scalable feature development across multiple screens and modules
- Built API-integrated workflows and data-driven features supporting real-world use cases
- Structured data models and handled CRUD operations to support dynamic, data-driven features
- Focused on usability and UI clarity, refining layouts, navigation, and interactions to improve overall user experience
- Iterated on features through a product-driven workflow, incorporating planning, implementation, debugging, and refinement
- Improved maintainability and reduced refactoring overhead through reusable components and consistent UI patterns

Developer Portfolio Website — Frontend Developer

React / Next.js, JavaScript, HTML, CSS

- Designed and built a responsive frontend portfolio to showcase projects, skills, and code samples
- Deployed and maintained the site with iterative updates as projects evolved
- Implemented clean layouts and reusable components with a focus on clarity, accessibility, and performance best practices

EXPERIENCE

StartupHakk — Software Development Apprentice {Remote} [March 2026 – June 2026]

- Develop and maintain backend services and REST APIs to support data-driven application features
- Collaborate with senior developers to debug issues, improve application performance, and implement production-ready features across frontend and backend systems
- Designed and implemented a full-stack activity logging feature using PostgreSQL, .NET, and React, including partitioned database tables, asynchronous logging services, and real-time role-based activity feeds for admins, instructors, and students
- Participate in Agile workflows including stand-ups, task tracking, code reviews, and iterative development
- Contribute to shared codebases using Git-based workflows and collaborative development practices

Developer (Freelance / Independent Projects) {Remote} [July 2025 – March 2026]

- Developed responsive frontend features using React and JavaScript
- Integrated REST APIs to support dynamic interfaces
- Debugged and refined UI components for improved consistency and usability

SKILLS

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3, Responsive Design

Backend: C#, .NET / ASP.NET Core, REST APIs, CRUD Operations

Database: PostgreSQL, SQL, Database Design, Data Modeling

Tools & Workflow: Git, GitHub, Debugging, Agile / Scrum, REST API Integration

Familiar With: Vue.js, CI/CD concepts, Azure basics, AI / LLM fundamentals (learning)

EDUCATION

Software Development Certificate

Tooele Technical College
